

The Benefits of Smokefree Buildings:

Why a Smokefree Policy is a Good Decision for Multiunit Housing Providers

A smokefree building is a sound business decision. As a property owner or manager, you have invested a lot of time, money, and hard work into your property. Making your building smokefree can reduce your costs, risk, and liability, and it's attractive to residents.

Learn why you should get on board with the nationwide trend for housing providers to go smokefree.

Smokefree Policies Are Legal!

Property owners and managers can legally adopt smokefree policies for all types of housing! Whether you own or manage market-rate, affordable, or public housing, you can make your buildings smokefree.

You can adopt a smokefree policy in the same manner that you adopt other rules to regulate activities that present a risk to the building or impact other residents, such as rules that address pets or loud music.

Smokefree policies are not discriminatory. There is no constitutional right to smoke and people who smoke are not a protected class.¹

Smokefree building policies can limit your liability as a property owner or manager. Residents with health issues that are caused by or exacerbated by exposure to secondhand smoke may pursue legal action against property owners or managers if appropriate steps are not taken to resolve the problem.²

A smokefree building does not mean that people who smoke cannot live in the building, or that people who smoke must quit. It simply means that people cannot smoke inside the building or in other areas specified in the policy, such as on balconies and patios.

Resources, such as sample lease addendums to specify a no-smoking policy, are available by contacting the Smoke Free Lowcountry Coalition at smokefreelowcountry@yahoo.com or by calling (843) 364-2635.

Smoking In Your Building is Expensive...

Reduce the cleaning and maintenance costs—and extra turn-over time—that comes with renovating a smoke-damaged unit after a resident who smokes has moved out.

A recent study found that costs in properties that allow smoking everywhere were nearly double that of smoking-related costs incurred at smokefree properties.³

Compared to smokefree units, cleaning and refurbishing costs can be up to \$3,000 more in units with heavy smoking.⁴

Maintenance and refurbishing expenses are not the only costs associated with allowing smoking in your building. Nationally, fires caused by cigarette smoking result in over \$300 million in property loss each year.⁵

Some property insurance companies offer a discount for buildings that have a smokefree policy. Ask your insurance carrier if you could qualify for a reduced rate if your building goes smokefree.

...and Dangerous!

Allowing smoking in your building can increase the risk of fire. An estimated 7,600 smoking-related fires occur in residential buildings each year in the US.⁶

Fires caused by smoking are the leading cause of residential fire deaths in the U.S., accounting for 14% of fire deaths in residential buildings.⁷

People who smoke are not the only victims of smoking-related fires. One in four casualties of smoking-related fires are the children, friends, and neighbors of the smoker who caused the fire.⁸

Secondhand Smoke Can Transfer In Buildings

Secondhand smoke can drift through buildings and enter common areas and units occupied by non-smokers through vents, doors, windows, hallways, electrical outlets, and through gaps around fixtures and walls.⁹

If smoking is allowed in your building, even in only a few units, residents and staff can be unwillingly exposed to secondhand smoke.

According to the U.S. Surgeon General, there is no safe level of exposure to secondhand smoke, and eliminating indoor smoking is the only way to protect non-smokers from the harmful effects of secondhand smoke exposure.¹⁰

Among the 616,000 multiunit housing residents in South Carolina, it is estimated that 206,000-216,000 of them are involuntarily exposed to secondhand smoke in their unit.¹¹

A recent survey of Charleston, South Carolina apartment residents found that the majority (66%) did not allow smoking inside their unit. However, about one-third of these individuals reported experiencing secondhand smoke exposure infiltrating into their unit from elsewhere in or around the building.¹²

Of those experiencing secondhand smoke exposures, over 40% reported these exposures occurred daily or a few times a week.¹³

Retain Your Current Residents

Charleston residents want smokefree housing policies. Approximately 80% of Charleston, SC apartment residents currently residing in smoking-allowable buildings indicated that they would not move out of their current residence if it were designated as smokefree.¹⁴

In fact, many of these residents indicated that they would be willing to give up other amenities in order to live in a smokefree building, such as a shorter commute time to work and other local services.¹⁵

Additionally, a recent survey of Berkeley County residents indicates that many favor smokefree multiunit housing.

Smokefree building policies can appeal to your current residents as well as new potential residents in your market. Non-smokers are the majority in every state.¹⁶ Additionally, surveys show that many smokers already choose not to smoke inside, in order to protect the health of their families and to prevent damage to their belongings.¹⁷

Attract New Residents

People increasingly want their living environment to be smokefree to protect their health, and are looking for smokefree housing options. Secondhand smoke is a cause of heart disease, heart attacks, asthma and other respiratory ailments, SIDS, lung cancer, and many other illnesses.¹⁸

65% of Charleston, SC apartment residents would prefer to have a policy in their building that prohibited smoking in all indoor areas. However, only 9% of apartment residents in this survey reported living in a smokefree building.¹⁹ A recent national survey found that nearly 30% of multiunit housing residents live in smokefree buildings, far higher than the estimates in Charleston.²⁰

High support for such policies along with the low prevalence of current smokefree policies could result in a large market opportunity for multiunit housing operators who implement smokefree policies in your area.

Attract residents by promoting your smokefree building as an amenity. Advertise your smokefree status in rental listings and on promotional materials.
